Sub: Implementation of an Email OTP verification process for student
registration on NATS 2.0 portal.

We are notifying to bring attention to a significant enhancement in NATS 2.0 platform – **the implementation of an Email OTP verification process for student registration.**

Effective immediately, students are required to **validate their email addresses through a one-time password (OTP)** sent to their registered email accounts before proceeding with the registration form.

This added layer of security is designed to ensure that only verified email addresses are eligible for registration, consequently reducing the occurrence of incorrect email entries and mitigating instances of duplicate Aadhar while registering.

Please note the **OTP** received over mail, **shall be active for a period of 24 hours.**

We anticipate that it will contribute to a more streamlined and error-free registration process.
